

CLAIM: The supernatural is just the yet unobserved. In fact there are many records of supernatural occurrences. The Supernatural has been observed, but it is not within our (sciences) power to test or re-create supernatural events or reality. The majority of great scientist throughout history and today have been overt supernaturalists, Those that deny God still have super-natural beliefs.

Many scientist are proposing more dimensions to our reality than we can now directly observe. They are using science to draw these conclusions.

Many physicists have concluded there are more dimensions to our reality than we can directly observe. This means it is scientifically possible to theorize about inter-dimensional / supernatural beings & reality.

Super-natural occurrences or elements in naturalistic science.

Many or most naturalistic atheistic scientist believe in non-natural super-natural processes such as...

<http://www.scienceug.com/super-natural-science.html>

Origin of the Universe

There are no known natural or scientific laws or means by which the universe came about, self creation. In fact current theories defy the laws of thermodynamics, gravity, and can not explain existence from nothing, even a quantum field must have an origin. Multiverses do not solve this either, as belief in them is supernatural as well.

<https://creation.com/models-of-the-origin-of-the-universe>

Origin of Stars

Star formation has never been observed from gas or dust, what is seen are stars in or behind dust or plasma clouds, but an actual gravitational coalescence has never been observed and defies many physical properties and principles, as dust material gathers it heats up and blows out again. Only small debris groupings could gather via gravitational attraction. A super-nova shock wave is theorized to create enough compression to for the first stars, but a supernova is an exploded star. What produced its origin?

<https://creation.com/closer-look-at-star-formation>

<https://creation.com/stars-dont-form-naturally>

Dark Matter & Dark Energy in the Big Bang cosmological model. Neither of these have ever been observed, or tested. They are only theorized to exist to make parts of the BB Theory plausible.

Origin of life

A naturalistic origin of life says that life must have arisen from non-life (abiogenesis). This defies the laws of bio-genesis. The environment for life to arise naturalistically is problematic. Without oxygen in the atmosphere there is no ozone layer, thus any simple life would be e-radiated by its nearby star/sun. With oxygen the molecules are pulled apart in oxidation. In water you also have hydrolysis and the same oxygen issues. What sustains life in the environment is highly toxic to the formation of life outside of an already working biologic system with membranes and cellular system for capture and use of energy etc.

<https://creation.com/lifes-origin-still-a-mystery-for-evolutionists>

Origin of information

For information to self organize and procreate for example in DNA by un-caused random natural processes is statistically impossible, defies the observations of information theory and all we know from molecular biology. Information is immaterial expressed in/on/through the material. Example: On a printed page the information is not the paper or ink, it supersedes the material upon which is used to convey its program or message. Information is only recognizable by intelligent agents/being. No known example has been observed where information has been produced apart from intelligence. We find information systems like DNA, but formulating its naturalistic origin apart from intelligence surpasses the ability of naturalistic science as yet.

<https://creation.com/four-dimensional-genome>

The above are believed, not from scientific evidence, but based on faith. They are believed not from what we don't know about the world, but from everything that we do know. These beliefs defy known laws of nature in contradiction to all we know, scientifically.

<http://searchcreation.org/> search "dimentions, star formation, origin of life, universe, DNA, information, supernatural"

Self organizing information systems that grow in complexity have never been observed to spontaneously arise in nature. Molecules to Man Natural Progressive Evolution is not scientific and has not been scientifically observed.

Degenerative and stabilizing and diversifying evolution has been observed via mutation, natural selection and adaptation (already present genetic diversity). No new features or creatures have been observed to have arisen from these processes.

Could Humans once observe and interact in the supernatural dimentions? The Bible claims "YES" but we have lost that ability

Questions

Does ruling out the Supernatural (naturalism) become a science stopper?

Is blind trust in "science" a handicapped observation system, rational?

Sir Isaac Newton (1543-1727)

The founder of classical theoretical physics is known for his genius in the world of optics, mechanics and mathematics. But what many people don't know is that he was devoutly religious and did a considerable amount of work in biblical numerology, drawing a connection between numbers in understanding God's plan for history from the Bible. He is quoted saying, "What we know is a drop, what we do not know is a vast ocean. The admirable arrangement and harmony of the universe could only have come from the plan of an omniscient and omnipotent being."
